RtibDatabase

Effective analysis, made easy.

FLDOE's free database for behavioral progress monitoring.

The RtI:B database enables your school and district to engage in **efficient problem identification** and analysis to accelerate your **PBIS implementation** across tiers of support.

I absolutely LOVE this system. I was tracking behavior data and graphs by hand and it was a nightmare… Amazed at how easy it was to use while still generating so much data."

*The program is fantastic for being able to dig into the data and make decisions for our school, students, and teachers. We have **made some significant changes in our school based on the data** we obtain from this program."*

Few

Some

Define
What is the problem?

Analyze
Why is it occuring?

Evaluate
Is it working?

Implement
What are we going to do about it?

All

Academics and/or Behavior

Simple point & click data entry that provides:

► A Tier 1 discipline information system that can:
  • Inform **Early Warning Systems**,
  • Support **equity**,
  • Assist with behavior management in all school environments, **including classrooms**;
► Efficient **progress monitoring** for Tiers 2 and 3; and
► Cutting-edge **systems analysis** for Tiers 2 and 3.

An Early Warning System is key to keeping students on track…

The RtI:B database helps you quickly identify students who aren't responding to your core curriculum for behavior, and provides the means to see if Tier 2 and Tier 3 interventions are making a difference.

Behavioral supports should result in equitable outcomes.

The RtI:B database's equity reports provide deeper insight about the nature of disproportionate discipline in your school.

A positive and preventative climate starts in the classroom…

Give your teachers the necessary data to build a well-organized, effective classroom environment. The RtI:B database supports electronic entry of classroom-managed and office-managed behavior incidents, with custom reports that help to quickly identify and analyze problems.

The progress of our most vulnerable students shouldn't be left to chance.

The RtI:B database's Tier 2 and 3 systems monitor students' progress towards demonstrating the core expectations for behavior. Cutting-edge Tier 3 features provide individualized measures for specific behaviors while allowing schools to identify variables that can improve supports for many students at once.

Remove barriers to effective problem-solving by putting data in the hands of those who need it.

Many district databases utilize metrics that make it difficult for your staff to answer questions that are central to the problem-solving process. The RtI:B database was designed by Florida's Positive Behavior Intervention and Support Project, for the sole purpose of supporting effective problem solving for behavior.

It's easier than you might think…

Users report entering a week's worth of progress monitoring data for a student in less than two minutes, and our online and remote technical assistance allows your staff to learn the system when it's convenient for them.

All it takes is an email to get started

With their principal's permission, anyone can request an account, and in most situations the RtI:B support team can get you access within one business day.

Don't wait – get started today!
